OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

Substitution Features

aalt Access All Alternates

This feature makes all variations of a selected character accessible.

calt Contextual Alternates

In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

liga Standard Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

onum Oldstyle Figures

This feature changes selected figures from the default lining style to oldstyle form.

lnum Lining Figures

This feature changes selected figures from oldstyle to the default lining form.

tnum Tabular Figures

Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

numr Numerators

Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

dnom Denominators

Replaces selected figures which follow a slash with denominator figures.

frac Fractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

sups Superscript

Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

subs Subscript

The "subs" feature may replace a default glyph with a subscript glyph.

- ordn** Ordinals
Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.
- case** Case-Sensitive Forms
Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.
- locl** Localized Forms
This feature enables localized forms of glyphs to be substituted for default forms.
- salt** Stylistic Alternates
Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.
- ss01** Stylistic Set 1
Glyphs in stylistic sets may be designed to harmonise visually, interract in particular ways, or otherwise work together.
- ss02** Stylistic Set 2
- ss03** Stylistic Set 3
- ccmp** Glyph Composition / Decomposition
To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decompostion.
- jalt** Justification Alternates
Improves justification of text by replacing glyphs with alternate forms specifically designed for this purpose (they would have less or more advance width as need may be).

Positioning Features

- kern** Kerning
Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.
