## OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

### Substitution Features

**aalt** Access All Alternates

This feature makes all variations of a selected character accessible.

**calt** Contextual Alternates

In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

**liga** Standard Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

**onum** Oldstyle Figures

This feature changes selected figures from the default lining style to oldstyle form.

**lnum** Lining Figures

This feature changes selected figures from oldstyle to the default lining form.

**tnum** Tabular Figures

Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

**numr** Numerators

Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

**dnom** Denominators

Replaces selected figures which follow a slash with denominator figures.

**frac** Fractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

**sup** Superscript

Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

**subs** Subscript

The "subs" feature may replace a default glyph with a subscript glyph.

- ordn** Ordinals  
Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.
- case** Case-Sensitive Forms  
Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.
- locl** Localized Forms  
This feature enables localized forms of glyphs to be substituted for default forms.
- salt** Stylistic Alternates  
Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.
- ss01** Stylistic Set 1  
Glyphs in stylistic sets may be designed to harmonise visually, interract in particular ways, or otherwise work together.
- ss02** Stylistic Set 2
- ss03** Stylistic Set 3
- ccmp** Glyph Composition / Decomposition  
To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decompostion.
- jalt** Justification Alternates  
Improves justification of text by replacing glyphs with alternate forms specifically designed for this purpose (they would have less or more advance width as need may be).

### Positioning Features

- kern** Kerning  
Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.

---
